

TINY HOUSE FRAMES

More and more Kiwis are coming around to the idea of living in a tiny home. To meet this demand, Central Steel Framing offers lightweight, easy-to-assemble, custom tiny house frames. Just get in touch with us or send us your designs to see how we can make it easy for you.

DESIGN

If you are interested in building a tiny house, sleepout or office, our light gauge steel frames are the perfect option. We construct our tiny houses using AXXIS® Steel for Framing, which is backed by New Zealand Steel's 50-year durability statement. We can work with your design requirements to build you a custom tiny house fit just for your needs – whether you are after a loft or even a curved roof.

ASSEMBLY & DELIVERY

We manufacture and deliver our tiny house frames either as pre-assembled panels, or fully assembled ready for you to fit out. Our pre-assembled panels are fast and easy to construct - we clearly label each component to make it simple for you.

Our manufacturing facility is based in Taupo, centrally located to deliver tiny house frames to the North Island.

WHY BUILD A TINY HOUSE WITH STEEL?

- Light gauge steel framing is only a third of the weight of timber framing, making it much easier to transport and move around.
- Steel framing is fast and easy to assemble, so you can spend more time building your dream tiny house.
- Steel framed houses are strong, straight, and stable.
- Steel framing is 100% recyclable and fire-resistant.
- Steel framed houses can be insulated to NZ standards and easily fitted with external and internal linings.

BUILD YOUR NEXT PROJECT IN STEEL TODAY TO REALISE THE BENEFITS

LIGHT STEEL FRAMING SPECIALISTS

Central Steel Framing (CSF) has the combined experience of 60 years in the cold formed steel industry. Based in Taupo, CSF provides light steel framing solutions to the North Island area. We will help you lift your game, whether it be residential, commercial, industrial, or healthcare applications.

Get in touch with us to discuss how we can increase efficiency, accuracy and save time for your next project.

WHAT WE OFFER

Commercial Interior and Residential Light Steel Frames and Trusses

Strong, straight, fire-resistant, and lightweight.

Modular Construction Products

Steel framing is the ideal chassis for modular construction, whether it be a residential home, tiny house or bathroom pod, we have the ideal product for you.

Tiny House Frames

Our steel frame tiny houses are lightweight, strong, and easy to assemble. We can work with your design requirements to build you a unique tiny house.

Sheds, Barns and Garages

Custom design your perfect shed or man cave and let CSF turn it into a reality.

Access Platforms & Staircases

The CSF stair system is a galvanised, lightweight, modular access system with non-slip treads for industrial applications. Ideal for access to mezzanine floors, upstairs offices or plant and equipment.

Other Applications

From planter boxes to complex curves, light gauge steel has endless possibilities. We can innovate the design process to produce almost anything in light gauge steel.
